Chat in-site system	<b>~</b>	<b>✓</b>			

The beside chart demonstrates that our system strikes the balance between needs, features, and pricing scheme. Established players such as SAP may have higher time efficiency, however, it equates to much higher prices which young and growing companies may not be able to afford. Companies such as Forca ERP, Ascend ERP, Phincon, and Mekari may have the same price range as us, but they offer fewer modules. Moreover, we can provide a more efficient system installation, personalized environment, user-friendly design, mobile applications, and faster application implementation compared to the others. We've also tied a distinct set of competitive advantages into Boxity ERP, which will help us differentiate from these competitors and ascend to a market leadership position.

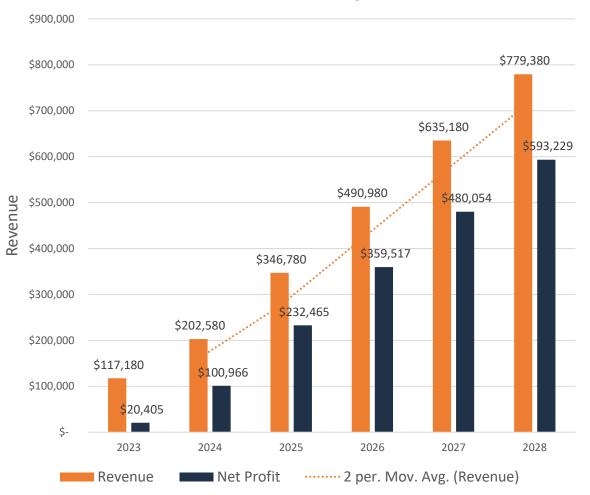

With the competitors being firmly entrenched in the competitive landscape, gaining market share amongst them will be no easy task. Nonetheless, the market is sizable and has great growth potential, therefore there is plenty of room for new entrants like us.
